## Набивные колонки GC

**Набивные колонки для ГХ** состоят из трубок из нержавеющей стали, ПТФЭ или стекла, заполненных насадочным материалом (неподвижная фаза). Набивные колонки могут работать с большими объемами проб и не подвержены загрязнению. Стекланные колонки используются для приложений, требующих высокой инертности, металлические колонки используются для менее требовательных приложений, а колонки из ПТФЭ предпочтительны для приложений с низкой температурой.

## Packed GC Column Set
